Golden Predator Commences Geotechnical and Metallurgical Drill Program at the Brewery Creek Project

Vancouver, BC, July 13th, 2016: Golden Predator Mining Corp. (TSX.V: GPY) (the “Company”) is pleased to announce it has commenced a 1,600 meter engineering and metallurgical drill program at its Brewery Creek Property. The drilling is focused at the Golden, Lucky and Kokanee pits which were previously mined in the 1990’s and historic data indicates significant oxide gold mineralization remains unmined. The drill program is scheduled to drill 18 PQ sized core holes to acquire material for metallurgical testing. The testing will include column leach tests and is designed to confirm the in-situ gold grades and expected recoveries for the designed heap leach process in the existing Preliminary Economic Assessment (PEA).

An additional 11 holes will be drilled around these former pits to re-establish ground water monitor wells and to obtain additional geotechnical information to acquire the final parameters for the new pit designs and permit requirements. Once the drilling is complete and all test results have been received Golden Predator will be able to update and complete the mine design for permit submission to YESAB.

The technical content of this news release has been reviewed and approved by Mike Burke, P. Geo, Chief Geologist and a Qualified Person as defined by National Instrument 43-101.

Golden Predator Mining Corp.

Golden Predator Mining Corp., a Canadian gold mineral exploration company, is focused on advancing its high grade 3 Aces Project and the Brewery Creek project, a past producing heap leach gold operation in Canada’s Yukon.
